It is important to clarify that no matter what type of food you eat, be it a processed meal or a full-on meal cooked from scratch, it is equally digestible by the body and considered a proper meal.

Technical Field The present invention relates to systems and methods for processing streaming data, and more particularly to systems and methods for transferring data from a sender to a receiver in real-time using a plurality of time shifted packets.

2. Description of the Related Art Audio and video compression are vital to the success of media streaming technology. Streaming video and audio, however, has unique problems that often require different technologies to be used for compression. Some

problems are addressed in the MPEG-4 standard by the Intra and Inter (I) pictures. The MPEG-4 standard also has an ability to optimize the bit rate of the video stream based on the needs of the receiver. However, this ability is often not sufficient to compress video in real-time at a reasonable bit rate. Optimized Codecs for Streaming Video and Audio Moving Picture Experts Group (MPEG) has incorporated a method for streaming video and audio into the MPEG-4 standard. This method is known as the MP4V (MPEG-4 Video) format, and is available from MPEG, 648931e174
