Since AutoCAD is primarily used for drafting, basic drafting skills are a prerequisite for its use. Although AutoCAD is not a typical graphics program, many users enter the AutoCAD environment by starting in a standard graphics program. The interface between the application and the graphics program, however, is very different. Because AutoCAD is a desktop app, users must have access to a computer with an operating system. An AutoCAD user should also be familiar with Windows or the Mac OS. AutoCAD is a commercial application, so costs can range from $2000-$2500. AutoCAD LT, AutoCAD s Free Trial version, is offered free of charge. Introduction AutoCAD is not a real-time drafting tool. AutoCAD s drawing speed can be slow when compared to other real-time drafting tools. On the other hand, AutoCAD offers numerous features that are not available in a real-time environment. AutoCAD s ability to create documentation and geospatial data makes it ideal for many types of projects. AutoCAD is the most widely used commercial drafting software today, and it has an active community of users and developers. Author Active since 1999, Dave Thomas is a Technical Support Engineer at Crain Communications, Inc., a provider of electronic documents, printing and workflow solutions. Editor s NOTE: A project that may be started in AutoCAD LT is not necessarily compatible with AutoCAD. Basic Features AutoCAD LT and AutoCAD have many similarities. However, the primary difference between the two products is that AutoCAD LT offers a free, trial version. The AutoCAD LT trial is a convenient way to try AutoCAD LT before buying. A licensed version is available for a cost, but there are times when the trial version is sufficient. There are two AutoCAD LT licenses available. Standard AutoCAD LT license is for personal use. AutoCAD LT Professional license allows multiple users and covers the possibility of losing all of the data in AutoCAD. A registered version of AutoCAD LT is only available from Autodesk. Si tratta di un incremento netto di 3,3 milioni, visto che i ritardi sono stati di 15,3 milioni e non di 14 milioni come nel 2009 (a differenza che nel 2008). Tra i veicoli pesanti i camion hanno aumentato di 14,3 milioni (-9,9 per cento) in linea con i 5,3 milioni di aumenti registrati dal 2009. Secondo le stime dell'ANC, la crescita media del settore per l'intero 2010 è stata di 18,2 milioni di veicoli pesanti, pari alla quota di un trimestre su due. Quest'anno i camion non sono stati l'ultimo ciclo della "crescita mai vista" dell'industria del trasporto e dell'inquinamento. Il ritmo di crescita è stato maggiore nell'ultimo decennio (dal 2002 al 2010) che nella precedente storia, in cui però il numero delle automobili è aumentato soltanto di 2,4 milioni. Sul fronte dei piccoli veicoli, sono invece diminuiti gli aumenti (-4,5 milioni), soprattutto a causa di af5dca3d97
